

ACKNOWLEDGMENTS

I offer thanks to the following people and organizations for helping me with my research and the writing of this thesis. For help with editing, providing helpful comments and suggestions, thanks to Marty Fisk, Roger Nielsen, Anita Grunder and Bob Duncan. For help understanding helium isotope systematics (in general and specifically in Iceland), thanks to Dave Graham. For help with modeling of mantle melts at varying pressures, thanks to Dave Christie and Charlie Langmuir. For help with crystallization modeling and multiple other igneous petrology problems, thanks to Roger Nielsen. For help with thermodynamic modeling and understanding thanks to Marty Fisk. For encouraging questions and giving me the opportunity to bounce ideas around in my mind as well as theirs, thanks to Britt Hill, Lance Forsythe, Doug Pyle, Roger Nielsen, Dave Christie, Marty Fisk, and Dave Graham. For running of analyses and help understanding the processes involved, thanks to Dr. Bob Walker and the OSU Radiation Center, Dr. Peter Hooper at WSU, and Dr. David Graham, Dr. Bob Duncan and Dr. Roger Nielsen at OSU. For editing, direction, and help finishing in two years thanks to my advisor, Bob Duncan.

For his kindness, hospitality in Iceland, and encouragement, thanks to Leo Kristjánsson (and his family). For letting me wander at will around their sheep pastures, thanks to the property owners around Eyjafjöll. For the inspiration and guilt necessary to get this thesis finished by the end of the summer, thanks to Steve Moothart.

Special thanks to Roger Nielsen for his open-door policy and for so patiently helping me out with my geochemistry problems!!

For funding of this project, thanks to: NSF grant EAR 30-262-1625; and the OSU Geology Department, for partial funding of the microprobe analyses.
