Figure D.01 (a-f):

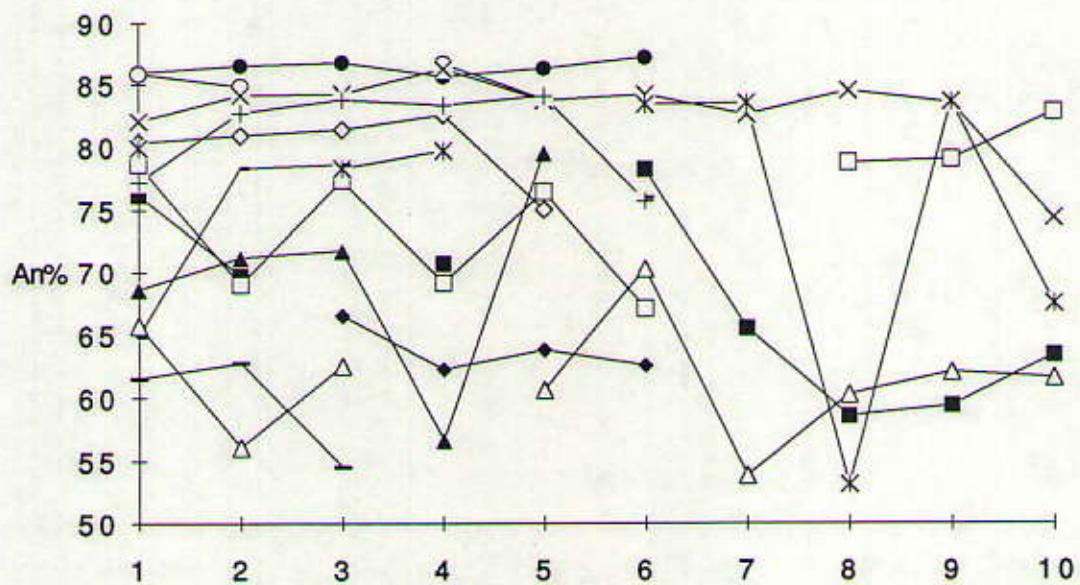

Microprobe transects of plagioclase phenocrysts. Each graph contains all the plagioclase crystals probed from one sample. Each symbol represents one different crystal. Each transect runs from the rim, across the core, to the other rim through equidistant increments (equidistant relative to one phenocryst only). In general the number of points corresponds to the size of the crystal (more points = large phenocrysts). Missing data points represent crosses over inclusions.

**Figure D.01(a)****Figure D.01(b)**

Equidistant points within phenox, crossing from rim to rim,
from sample Ey-4B.

Figure D.01(c)

Equidistant points within each phenox, crossing from rim to
rim, from sample Ey-10.
